In step 9, there is an extra space in "**uvm -1.2**" - it should be "**uvm-1.2**"

Also, as an alternative, step 9 can be replaced by making changes to the variable UVM_HOME in your .cshrc file, as shown below:

First, open the .cshrc file using:

vim ~/.cshrc

Then, go to the end of the .cshrc file and add the following line:

setenv UVM_HOME /home/class/YOUR_ID/UVM/uvm-1.2

Finally, close the current terminal and open a new terminal for the changes in .cshrc to take effect.
